

System is Running Slow

- Understanding the problem
 - Processing
 - Disk writing
 - Networking (file transfer etc.)
 - Hardware
- Troubleshooting Steps:
 - Check if the right system is reported or you are on the right system
 - Check disk space (`df -h`, `du`)
 - Check processing (`top`, `free`, `lsmem`, `/proc/meminfo`, `vmstat`, `pmap <PID>`, `dmidecode`, `lscpu` or `/proc/cpuinfo`)
 - Check disk issues (`iostat -y 5`, `lsof`)
 - Check networking (`tcpdump -i enps03`, `lsof -i -P -n | grep -i listen`, `netstat -plnt` or `ss -plnt`, `iftop`)
 - Check system uptime (`uptime`)
 - Check logs
 - Check hardware status by logging into system console
 - Other tools (`htop`, `iostat`, `iptraf`, `psacct`)

`# yum install epel-release`
`# yum install iftop`

WHY?
MY COMPUTER
is
RUNNING SLOW
